

## Networks with proxy server

# PosterJet® 7

### Networks with proxy server

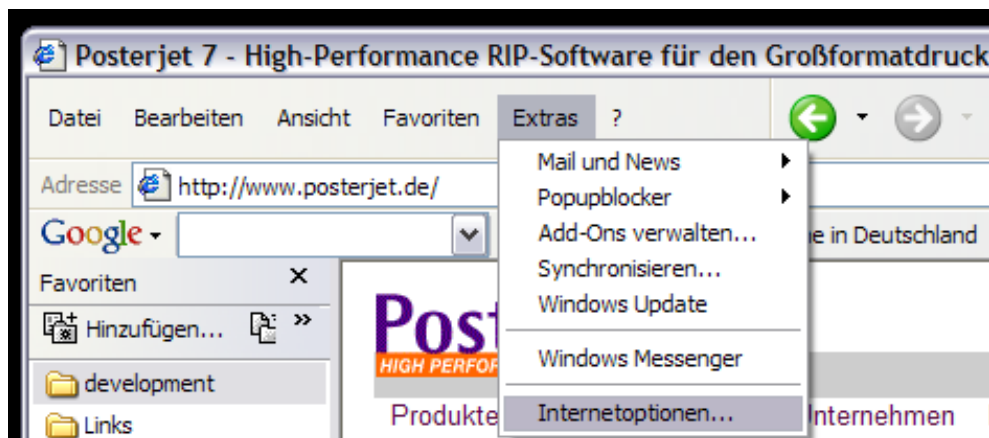

During a media profile-download from the internet over the Web Update window of the PosterJet client to a PosterJet server an communication-error may occur.

In most cases the reason for such an error is a wrong network configuration. The PosterJet client does not obtain the required rights to download media profiles from the internet and to upload media profiles to a PosterJet server in the network.

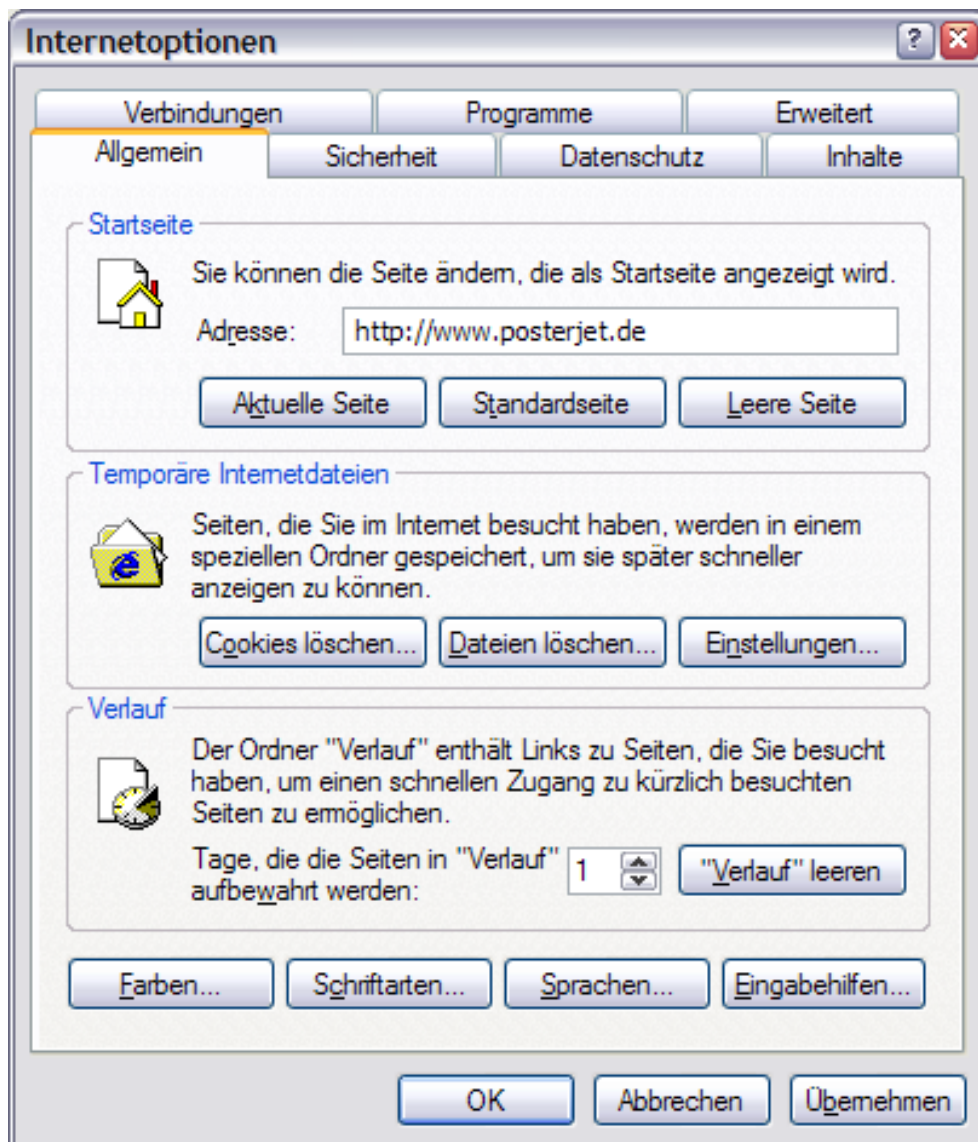

#### Internet options-settings

Normally connection problems during media profile-download can be solved by performing some settings in the Internet options of the Microsoft Internet Explorer 6. To perform these settings, follow the instructions below:

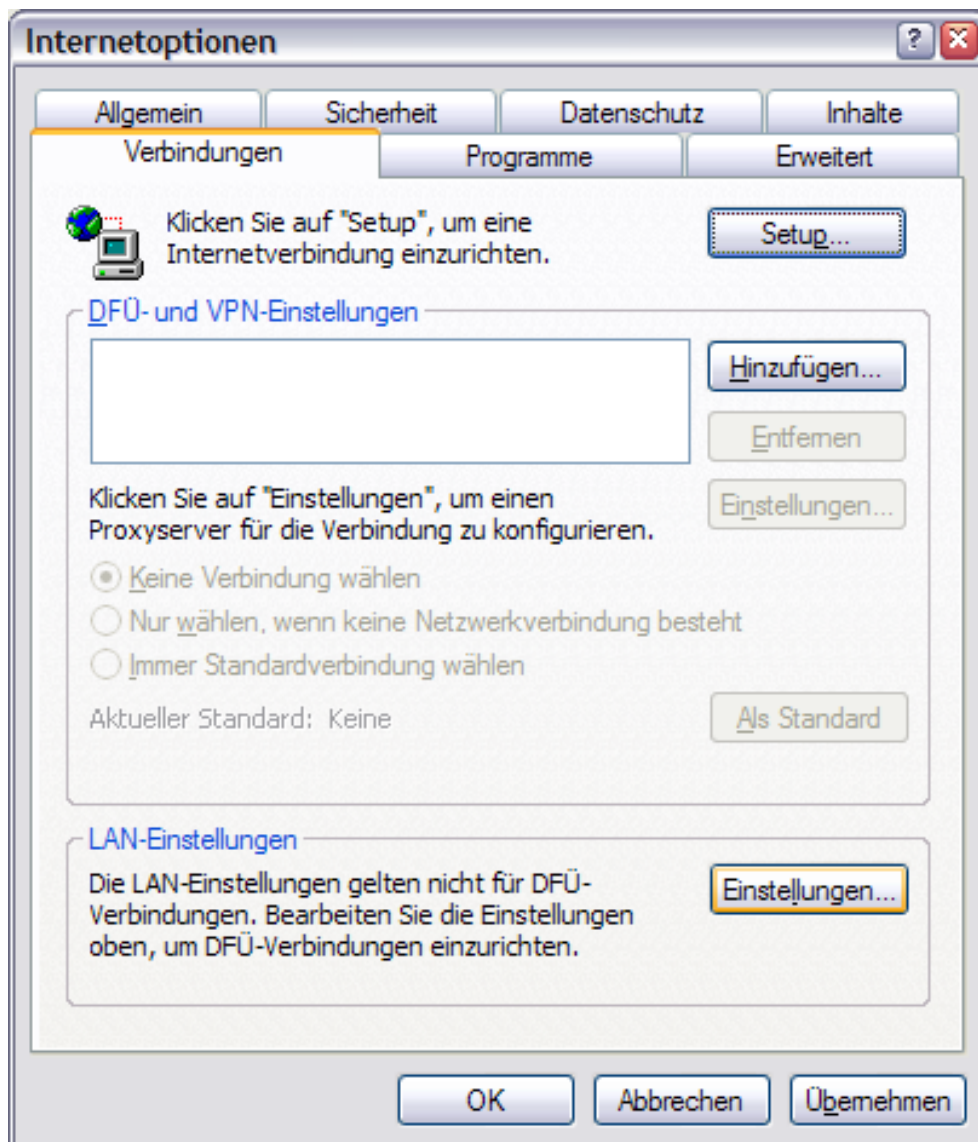

Run the Microsoft Internet Explorer (Version 6 under Windows XP) and choose from the menu "Extras" the entry "Internet options".

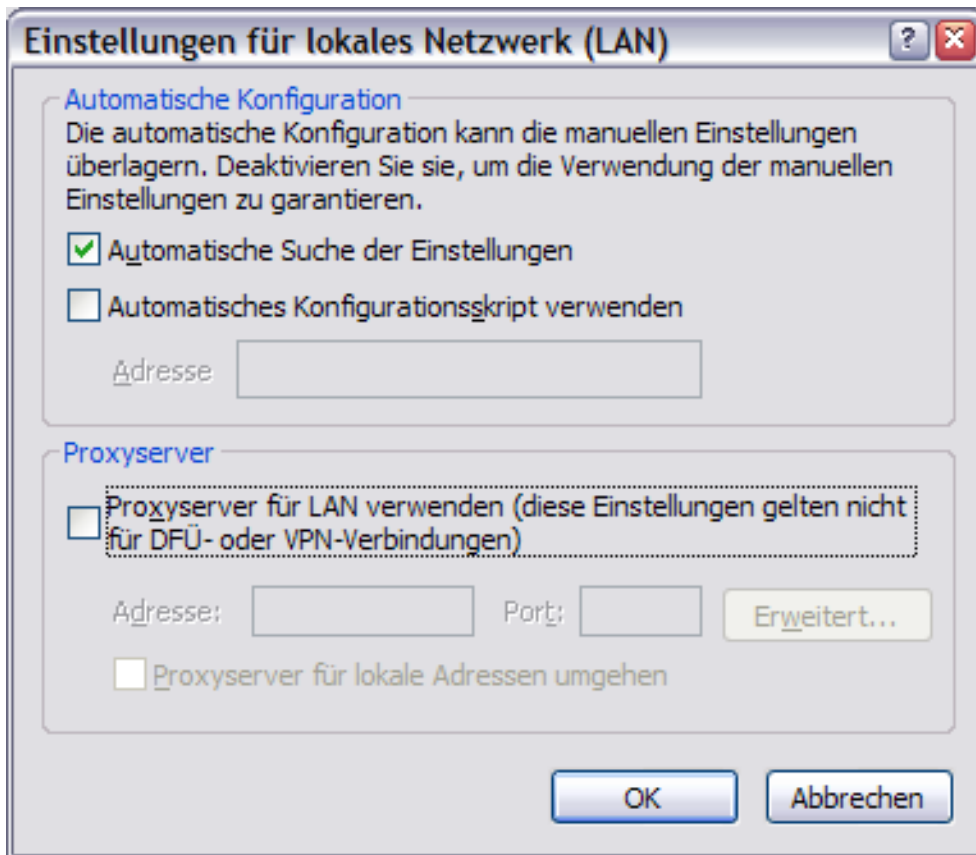

You may even open the Internet options-dialog by choosing the option "Internet options" from the Windows control panel. The dialog "Internet options" appears.

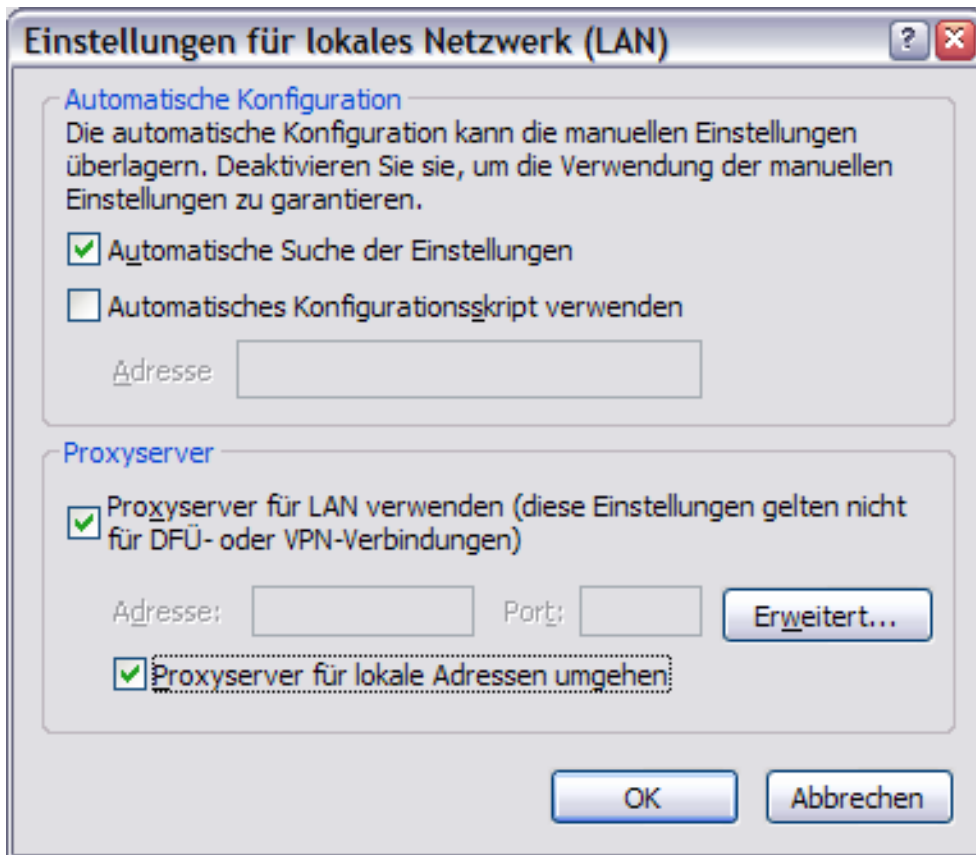

Activate the "Connections"-tab from the internet options-dialog.

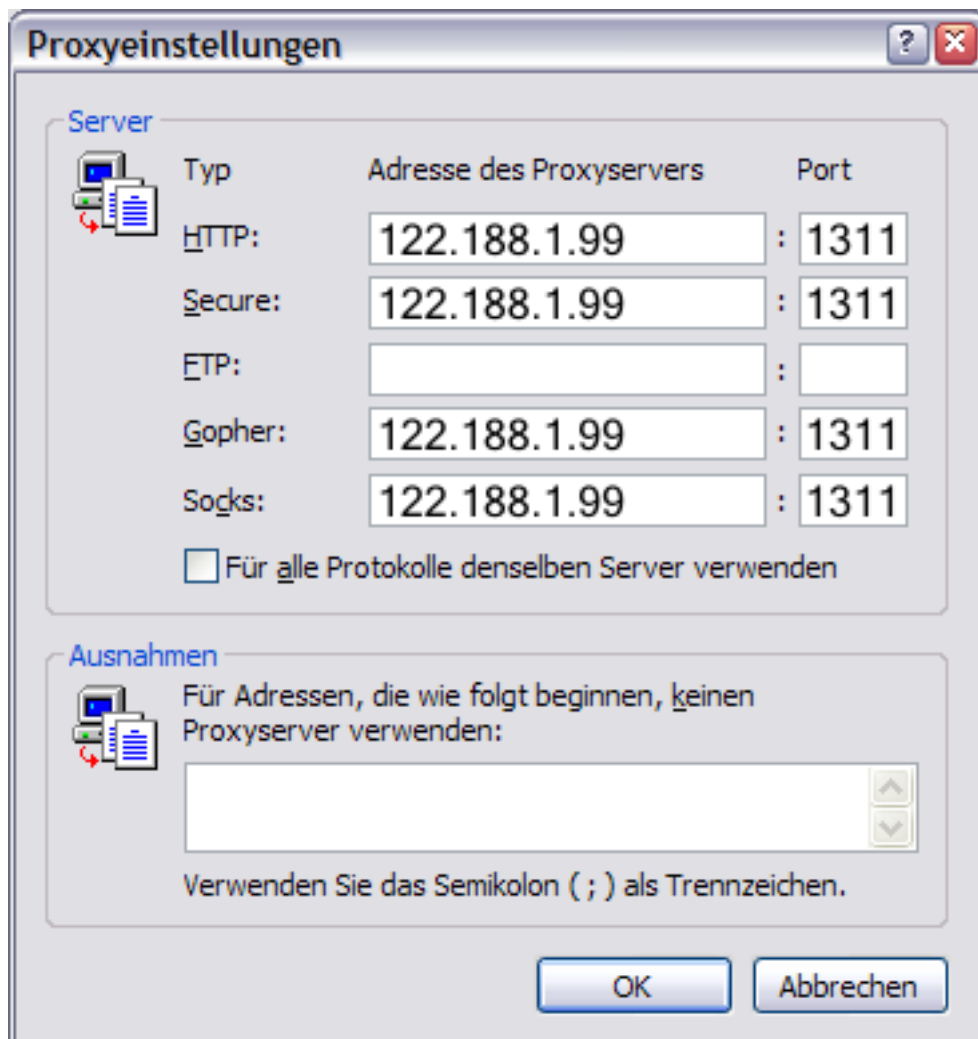

On the tab "Connections" click on the button "Settings..."-button in the chapter "LAN-settings". The dialog "Settings for local network (LAN)" appears.

In the chapter "Proxy server" of the "Settings for local network (LAN)"-window activate the two checkboxes "Use proxy server for LAN" and "Avoid proxy server for local addresses". Afterwards click on the "Advanced..."-button.

The dialog "Proxy settings" appears.

In the chapter "Exceptions" of the proxy settings-window enter the IP address of the PosterJet 7 server. In this example, the computer which hosts the PosterJet 7 server uses the IP address "122.188.1.9".
