

Windows 2003 Server with IIS

The logo for PosterJet 7, featuring the text "PosterJet" in orange and "7" in a larger, bold orange font, with a registered trademark symbol (®) to the upper right of the "7". The logo is positioned on the left side of a horizontal bar with a grey gradient background.

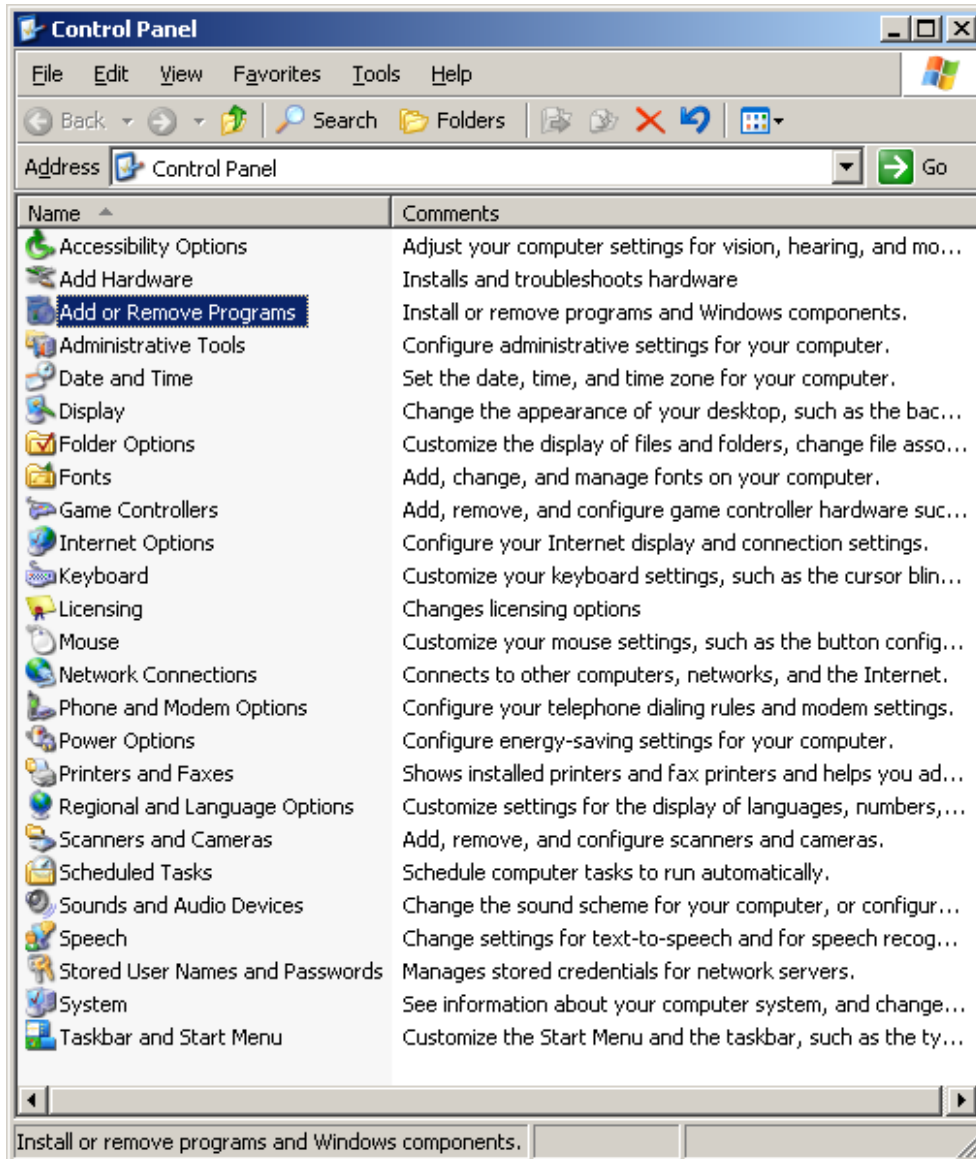

Windows 2003 Server with IIS

PosterJet 7 even works under Microsoft Windows 2003 Server. Normally the the Internet Information Server (IIS) is not installed. The PosterJet 7 setup will then install the PosterJet 7 server based on the PosterJet Server-Hosting. If the PosterJet 7 Server based on the IIS should be installed, please follow the instructions below.

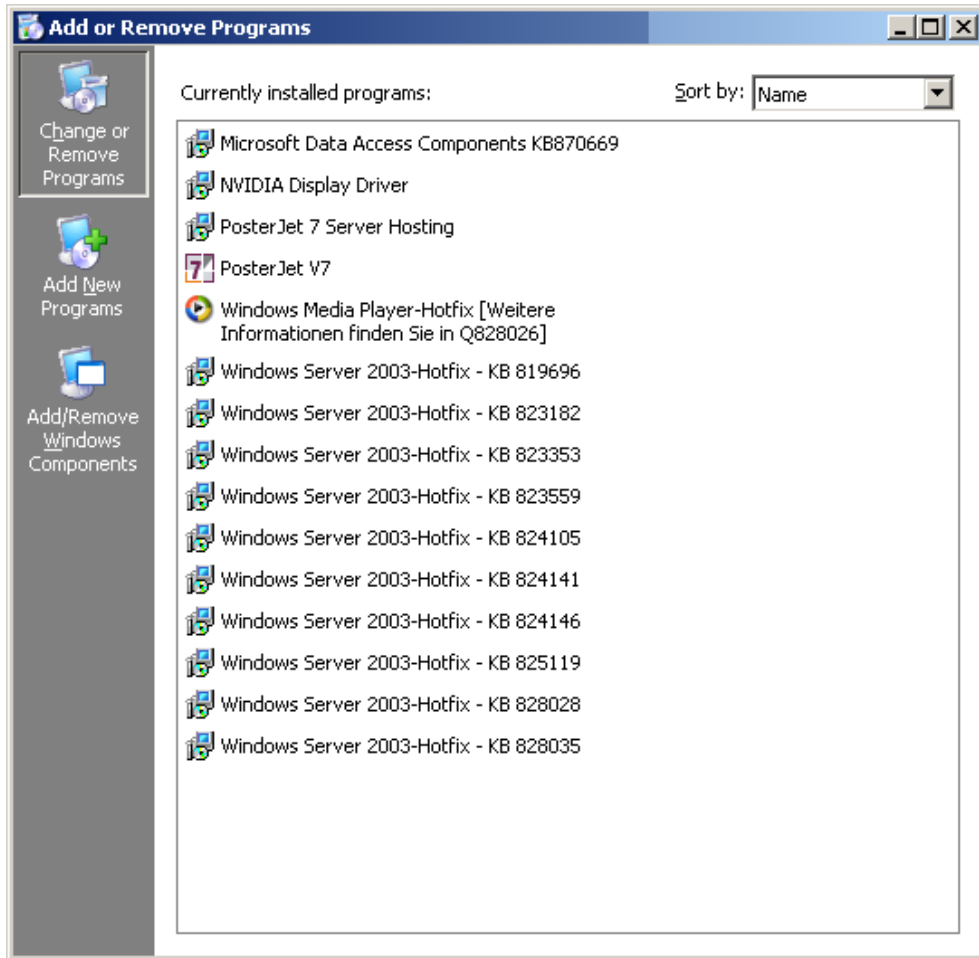

Installing the IIS

Please make shure, that during the installation of the IIS, the ASP.NET is installed too. Otherwise a proper installation of PosterJet 7 Server based on the IIS is not possible. For a proper installation please follow the instructions below:

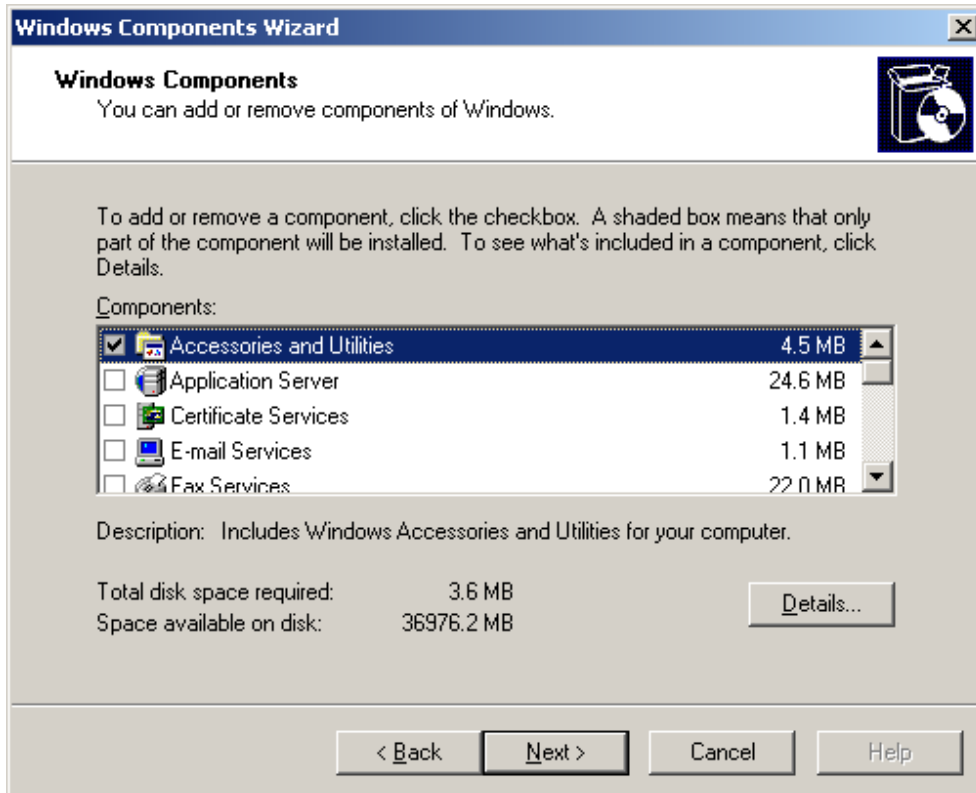

Open the Windows control panel (Start > Settings > Control panel)

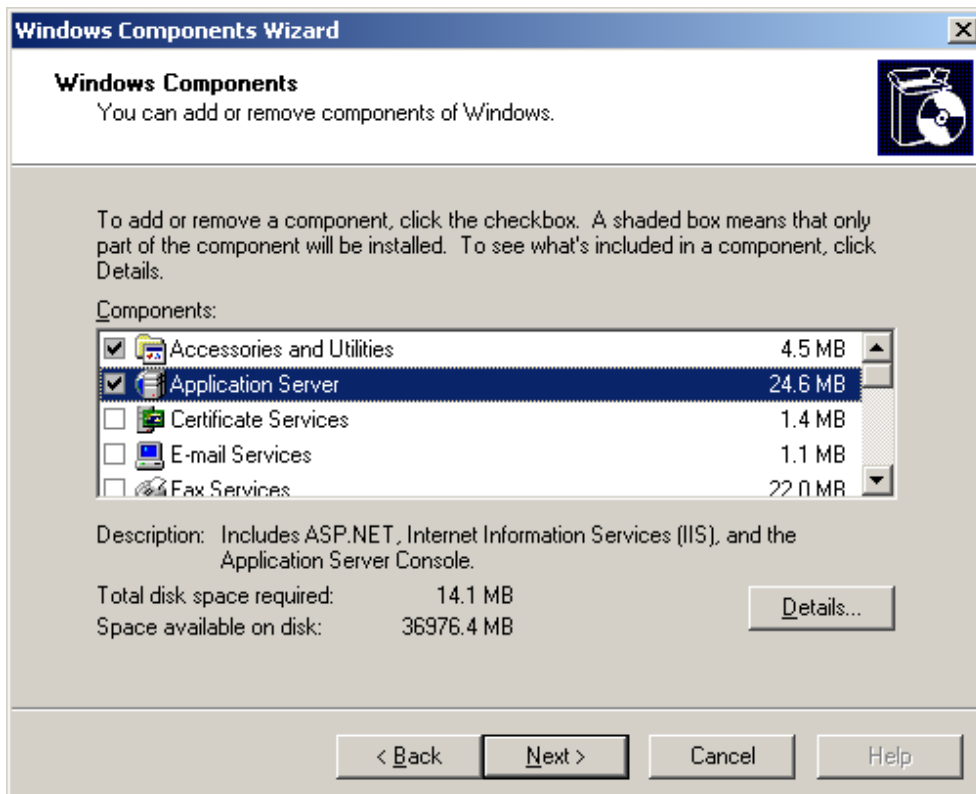

From the control panel choose "Add/remove programs"

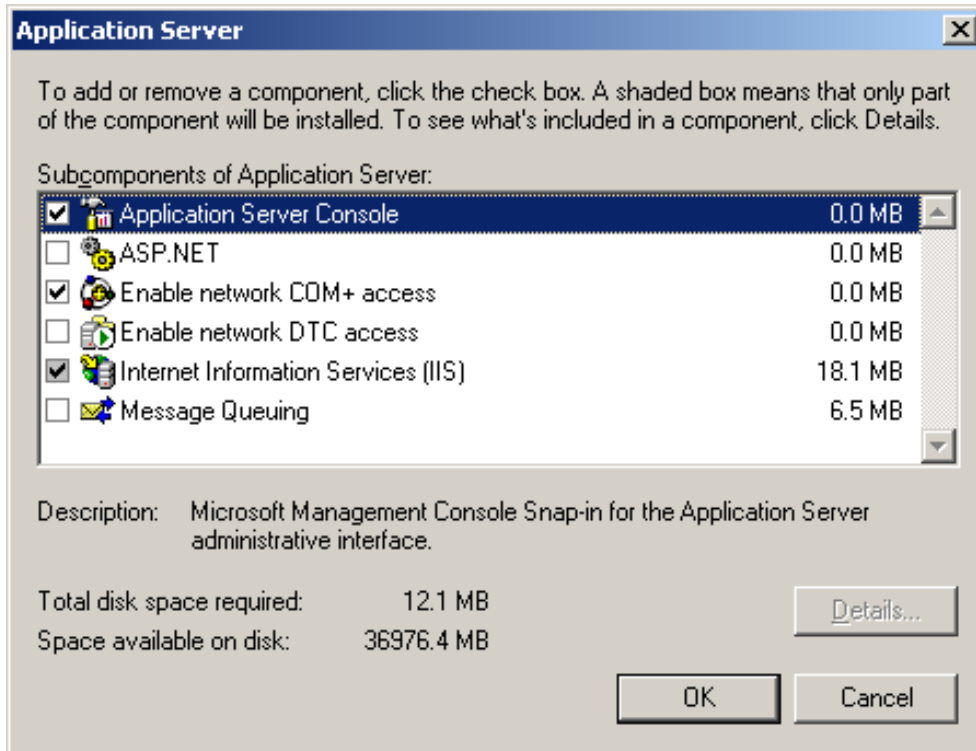

Choose "Add/delete Windows-Components"

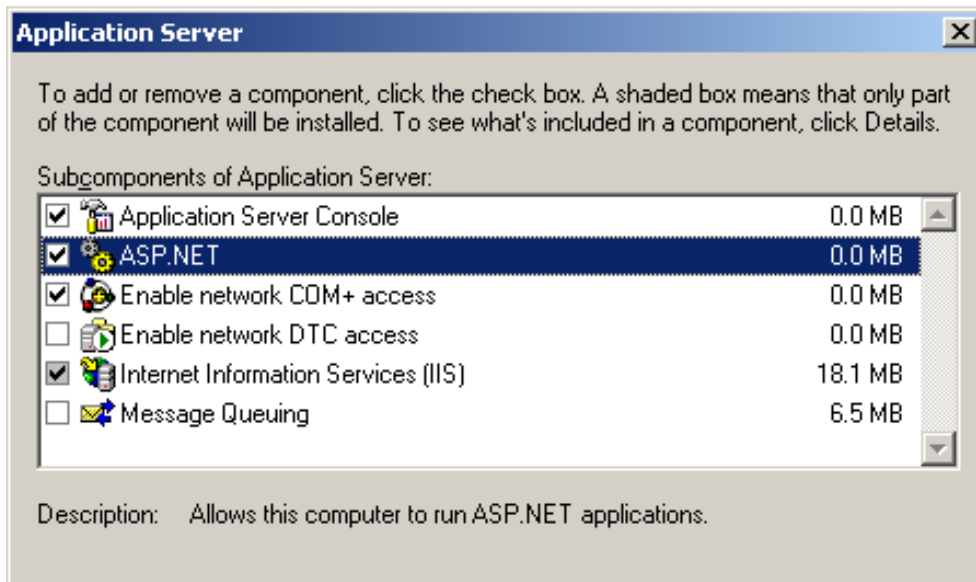

In this window activate the checkbox "Applicationserver"

Click on "Details..."

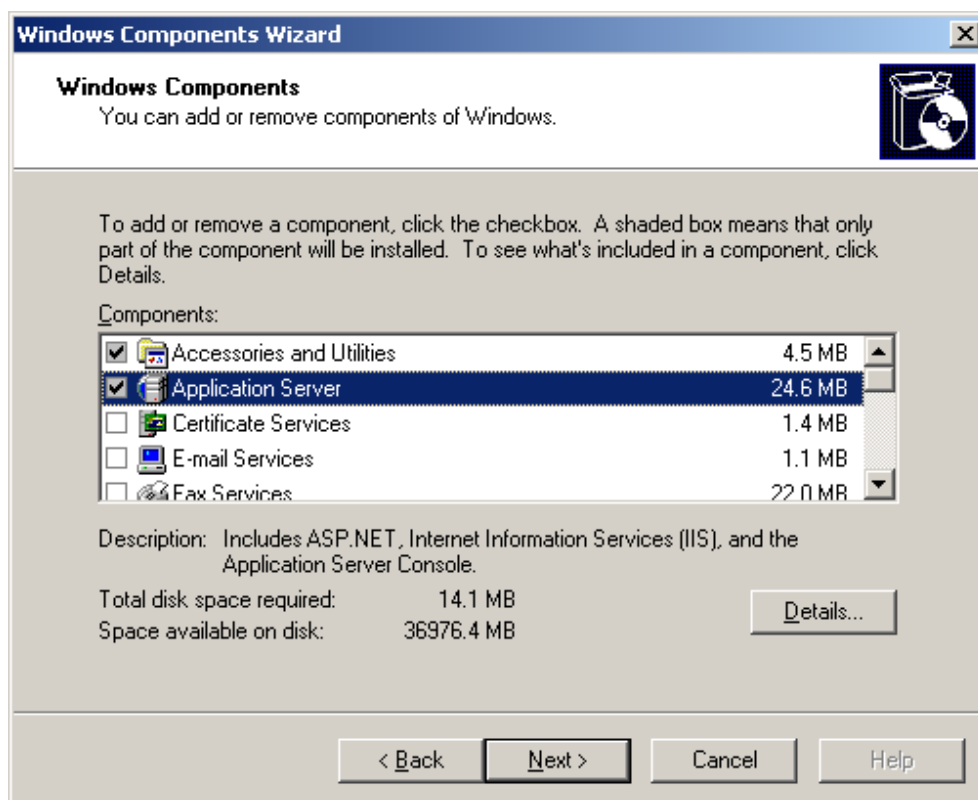

In this window activate the checkbox "ASP.NET". The IIS is automatically also chosen by choosing the ASP.NET.

Important

Just choosing the option IIS and not activating the option ASP.NET will not result in a proper installation of the PosterJet 7 server based on the IIS. It is obligatory to choose the option "ASP.NET".

Click on the "OK"-button, the Windows-components window appears again.

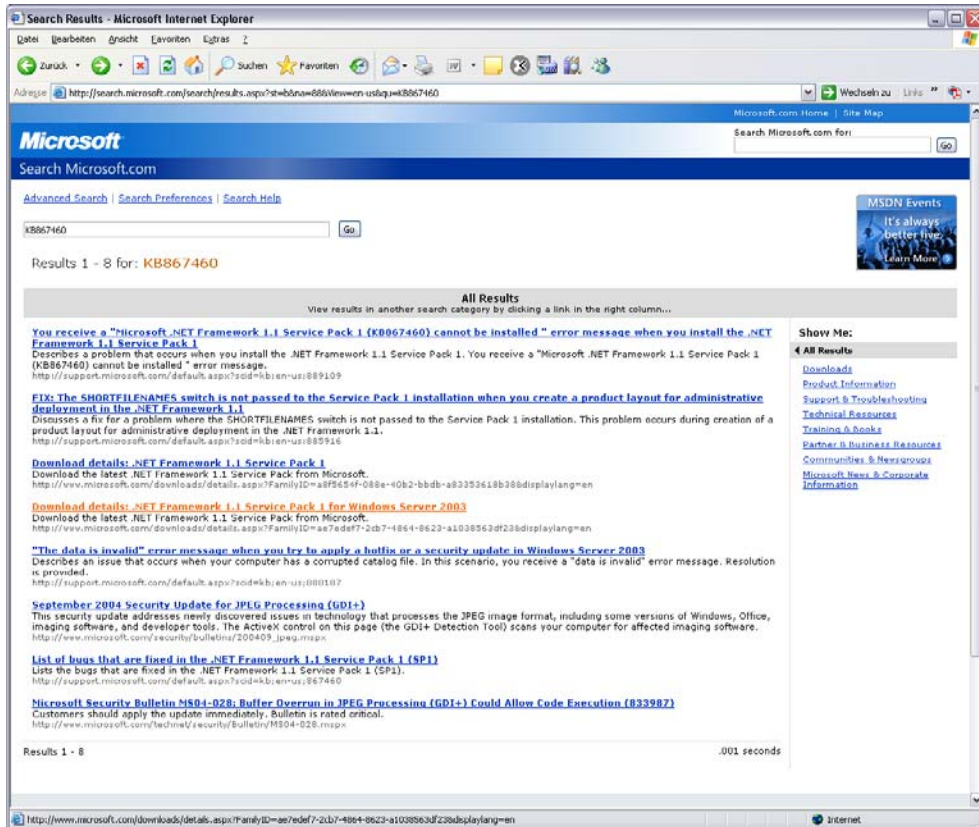

Click on the "Next"-button. The installation wizard will ask for the Windows Server 2003 installation CD.

The IIS and ASP.NET will now be installed. After a successful installation of IIS and ASP.NET, the PosterJet 7 server based on the IIS could be installed.

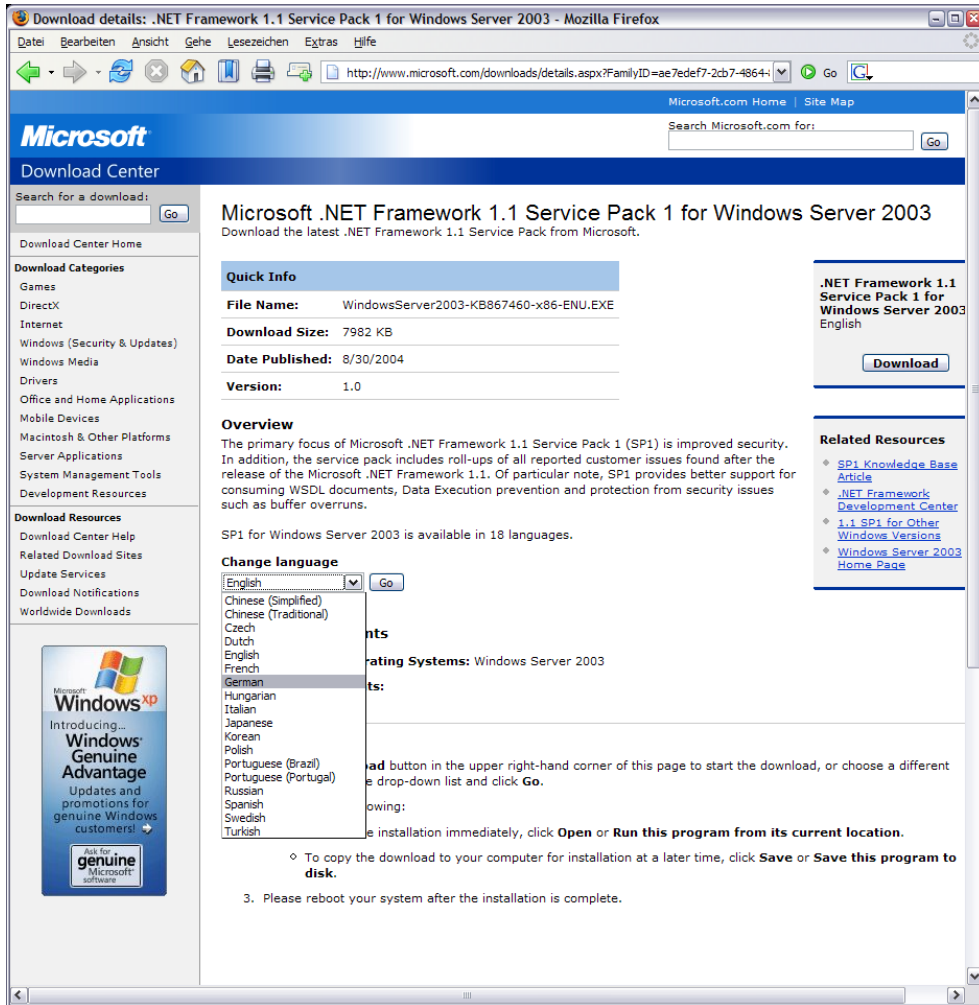

Service Packs for .NET Framework

During the installation procedure of PosterJet the Microsoft .NET Framework is installed by default. The Service Packs necessary to run PosterJet are only available via automatic Windows update.

If don't want to use the automatic update feature or disabled this functionality, you must download the required Service Packs manually from the Microsoft internet site. [Link to search for Service Packs for .NET Framework](#). You should search for "Microsoft .NET Framework 1.1 Service Pack 1 for Windows Server 2003".

Please note that the Service Packs for .NET Framework are localized. For an english Windows Server 2003 the required file is: "WindowsServer2003-KB867460-x86-ENU.EXE".

After installing the Service Pack, restart the "Autostart.exe" application from the PosterJet installation CD.
