

Restoring the auto start functionality of the PosterJet Web Hosting

PosterJet® 7

Restoring the auto start functionality of the PosterJet Web Hosting

The PosterJet Server based on the PosterJet Web Hosting is by default automatically launched during the Windows start. It may occur, that the Web Hosting for the PosterJet Server is not started automatically during the start of Windows. Manually the Web Hosting can be launched via the Windows start menu.

Restoring the autostart function

To restore the autostart function of the PosterJet Web Hosting, you must delete the hidden configuration file

HostingSetup.xml

Depending on your Windows login or your network account, this configuration file may be stored in several directories. Because of this you must search for this file with the search function of the Windows start menu. After locating the file, you must delete it. At the next start of Windows, the PosterJet Web Hosting is launched automatically.

Please note

The PosterJet Server installation based on the Microsoft IIS is not affected by this autostart functionality
